SpinetiX partners with Swiss distributor **Littlebit Technology's in-house brand axxiv computing** devices to offer SpinetiX ARYA cloud service and SpinetiX DSOS.

With almost 200 employees, the Littlebit Group targets DACH and Benelux countries and achieves about 500 million CHF (475 m Euro or USD\$508m) in turnover.

The Littlebit Technology collaboration will bring SpinetiX technology to more IT business channels and customers.

Commercial-grade axxiv devices, already known to IT integrators who are Littlebit customers, can now come with the SpinetiX DSOS and the SpinetiX ARYA cloud-based service. This bundle offers an all-in-one digital signage solution, working out-of-the-box-- ideal for businesses who want to get started with digital signage quickly.

DSOS is maintained by a dedicated engineering team at SpinetiX. The default DSOS configuration includes access to the SpinetiX ARYA cloud service, available to use by anyone, with a zero-cost option that includes first-line support.
