iBASE Technology introduces the SI-18 Signature Book, an ultra-compact digital signage player that the company calls "the world's smallest x86 digital signage player."

Powered by the AMD Embedded G-Series APU that packs two CPU cores and 80 GPU cores on one piece of silicon, the SI-18 measures 4.9" (12.44cm) x 4.9" (12.44cm) x 1.3" (3.3 cm) and features an industrial grade all-metal chassis with integrated mounting brackets.

Also included is AMD's UVD3 hardware video decoder which handles full HD playback of MPEG2, MPEG4, H.264, WMV9 and VC-1 video streams.

Near universal display compatibility comes from the Hybrid-DVI connector supporting DVI, HDMI and VGA displays. SI-18 systems come standard with an AMD Embedded G-Series T56N processor, 2GB of DDR3 memory, 160GB of hard drive storage and gigabit Ethernet. Maximum power consumption is an efficient 25 Watts.
