

Dune HD Network System

Written by Bob Snyder

"Dune," of course is the title of the famous series of sci-fi novels by Frank Herbert. And those sci-fi fans will "grok" the Dune HD Network system.

Dune HD Network is designed for easy, less complex digital signage. Automating the HD demonstration of media on monitors and TVs sets, it can cycle video in a show with the possibility to add scrolling text lines and logos (and schedule those to appear in specified intervals).

It also allows you to operate all of processes in system devices remotely.

With up to 1080P of video playback and HDMI v1.3, it does all the things you want from a basic digital signage system with an easy-to-use GUI.

With a special "HDNetwork"-enabled license installed, you can download firmware and use any Dune player models as a presenter in the Dune HD Network system: Dune HD Mini, Dune HD Base, Dune HD Base 2.0
