Making its global debut at InfoComm Asia, SpinetiX launches the **HMP200 Hyper Media Player**, a high-end digital signage media player capable of publishing information, video, pictures and text in 1080p Full HD to any screen or display device.

Ultra-compact, lightweight and with max. power consumption of 7W, the HMP200 can be concealed behind a screen, installed with 'zero config' network integration, and then, says the manufacturer, "simply forgotten about." There are no moving parts, the device has no vulnerability to PC viruses or OS issues, so SpinetiX offers a lifetime warranty for every Hyper Media Player it sells.

As well as decoding HD video, the HMP200 can publish data, audio, and dynamic content from RSS feeds, widgets and instant messaging using SpinetiX's own **Fusion** software, which resides inside the unit and is part of the package.

The creation of bespoke applications such as multi-screen videowalls, interactive kiosks and touchscreens is also possible as the HMP200 is based on open protocols such as SVG and JavaScript. There are comprehensive scheduling options and the unit's standard 8GB of solid-state memory can be expanded via USB 2.0.
