Exhibio releases their Enterprise System, a large-scale digital signage platform designed for easy deployment of digital signage into business and college campuses, retail chains and franchise locations.

The system is powered by the Enterprise Server, which runs , integrated software with a web-based interface where users can design signs and schedule content on screens anywhere in the world. One Enterprise Server combined with remote smart terminals can produce hundreds of digital signs, each showing unique content or sharing content with other screens on the system.

The signs can carry the same content as Exhibio's all-in-one X-800HD Digital Signage Engine: HTML, RSS feeds, live TV, video, audio, images, text, Flash, and more.

Exhibio's other product lines, the X and M-Series, push a single stream of content to connected displays.
