

Besides its Omnitapps Multi Touch Suite and the Cloud Brochure selector, **Omnivision** adds two new multi-touch applications: Indoor Way Finding and Interactive Whiteboard software.

The **Indoor Way Finding** multi-touch software had its introduction at ISE 2013 where more than 44,000 visitors used this software to find their way.

To make this software affordable, Omnivision designed it so users can create their own way finding solution (for shopping malls, trade centers, hospitals, etc.) by importing a high resolution floor plan and by importing their own CSV or Excel database.

The user-friendly **Omnitapps Interactive Whiteboard** software has all the function of a normal whiteboard with markers/pens. With one touch, users can choose the color and line thickness. It's simple and as Omnivision says "as simple as it should be."
