With the InfoComm introduction of a new line of LED Large Screen Systems branded "TL Vision," Trans-Lux now offers one of the most extensive offerings of digital display technologies. Included in the new TL Vision line of LED Large Screen Systems is the industry's first 3mm pitch.

J.M. Allain, President and CEO, Trans-Lux Corporation, says "With the introduction of our new TL Vision digital displays to complement our established line of Trans-Lux branded DataWalls and FairPlay branded Scoreboard Systems, Trans-Lux will look to capture a much more prominent position in the sports and entertainment, gaming, financial and leasing markets."

Trans-Lux has added a high resolution line of TL Vision Large Screen Systems to its offering including indoor and outdoor displays and an industry first 3mm LED solution. The groundbreaking new 3mm LED Display is for high resolution applications with image quality that rivals HD flat screen displays – but has the ability to be customized in virtually any size and shape.

In addition to LED digital signage solutions, Trans-Lux Corporation recently announced the formation of TL Energy which offers a comprehensive line of LED lighting technologies that emit less heat, save energy and enable creative designs.
