Edbak's VWT A video wall trolley is a solution for building video walls-- in any location and any module arrangement. The quick and intuitive assembly system facilitates both rapid and convenient installation and servicing.

The mobile solution helps in moving the video wall around, without the costs required to build several stationary systems. The standard caster wheel locks secure the system in place during installation and operation of monitors.

The aluminium profiles ensure a light and sleek solution.

The cable management system is concealed in the aluminium sections, to give a smart look to the video wall and its sophisticated indoor surroundings. VESA compliance and the screen monitor mounting system make the trolley video wall very convenient to use, while the 8-step micro-adjustment system requires no special tools whatsoever.

The flat screen height is infinitely adjustable, and the mounting design prevents the monitors from accidentally falling over. The system includes a shelf for a PC or an AV device.
