At the ISA International Sign Expo, Trans-Lux showed its newest state-of-the-art TL Vision large screen display solutions for visual communication in the sports and entertainment, financial, gaming, commercial, education, and government markets.

Featured at the show are the **TL Vision** HD 6mm, 10mm, 16mm and 20mm LED displays and the 7.62mm ticker display. The LED large screens configurations are available in almost any size or shape for indoor and outdoor venues with LED pitches ranging from 3mm to 127mm.

Trans-Lux also offers a line of TL Vision-enhanced **Fair-Play** scoreboards for athletic teams with a new line of environmentally friendly LED lighting solutions that provide cost-efficiency along with the ability to easily transform facilities to complement hosted events through the use of different lighting effects and colors.

A third business unit, **TL InfoVision** LED digital displays and software controllers deliver information and messaging in virtually any configuration—you can post up schedules, customer information, prices, directions, time & temperature and more.

“Our exhibit at ISA showcased the new Trans-Lux,” said J.M. Allain, President and CEO. “We have a new management team, a new product portfolio and new business propositions that combined, enhance our ability to deliver end-to-end digital signage solutions.”
