For InfoComm, Sanyo showcases its new **PLC-HF10000L projector**, the first 2K projector with the company's QuaDrive technology; and the PLC-HF15000L professional projector.

The PLC-HF10000L QuaDrive projector has 2048 x 1080 resolution and this native widescreen 3LCD projector produces 10,000 ANSI lumen brightness with a very wide color gamut that advances display capability for mid to large venues.

Also at InfoComm, the **PLC-HF15000L** is a new pro projector designed for the mid to large venue presentation, staging and digital signage markets.

Using a 4-lamp array, this projector achieves **an extraordinary 15,000 ANSI lumens** that Sanyo calls "the highest brightness LCD projector." Combining a High Resolution 2K longer-life inorganic LCD panel with Sanyo's exclusive QuaDrive technology produces thousands of hours of Full HD resolution with superior color gamut. A newly developed "Active Maintenance Cleaner (AMC)" extends filter life to 12,000 hours, increasing reliability and lowering maintenance cost.
