Canon introduces the **LV-8235 Ultra-Short Throw (UST)** projector that's capable of projecting an 80" picture from a projection distance of just 32cm (with just 2.4cm installation distance).

For educational and digital signage applications, the LV-8235 UST can sit on a table or be mounted horizontally or vertically on a wall, ceiling or floor. Spec'd with a brightness of 2500 lumens, native WXGA (1200x800) resolution and a 2000:1 contrast ratio, the projector has HDMI and VGA inputs and is IP- or RS232 controllable. It's very quiet for a short throw projector at 28 dBA.

Rear projection is ideal for video promotions in shop windows, restaurants, museums and the like, while under desk projection can turn tabletops or floors into useful display screens. The ultra short-focus technology of the LV-8235 UST means it can project large screen 3D in confined spaces.

With a long-life lamp of up to 3000 hours (in Eco Mode) and a long-life air filter of up to 4000 hours (in Eco mode), the LV-8235 UST should be economical to run.
