DynaScan Technology unveils three 1920x1080 LCDs displays at Integrated Systems Europe - all with DVI daisy-chain ports and RS232 control.

The DS55LX3 is a 55", 1500-nit LCD with local dimming backlight. It features a bezel of just 5.3-millimeters and screen-to-screen and built-in video daisy chaining so a single 1080p source can be used on video walls up to 6x6 in size without the need for any additional external video wall controller.

The DS72LT6 is a 72" LCD with a brightness spec of 5,000 nit aimed at outdoor apps such as outdoor enclosures and storefront windows. This display has a 30mm bezel and includes a direct LED backlight with local dimming.

DynaScan also introduced a 2,500-nit version, the DS72LT4, featuring a fanless thermal management system, with all other features the same.
