Christie adds a 46" LCD cube to its line with the **FHD461-X**, a 1920×1080 resolution direct LED-lit LCD that's specified at 4000:1 contrast ratio and with a brightness of 700 nits (cd/m2).

The bezel on this LCD is only 0.13" (3.4 mm) — top/left — and 0.08" (2.0 mm) — bottom/right. Inputs include two HDCP-compliant HDMI ports, VGA, DisplayPort and DVI.

This is an Energy-Star compliant display that only uses 0.5 watts in standby. It can be mounted horizontally or vertically in a video-wall application.

In addition, the Christie FHD461-X uses a true commercial-grade LCD panel and has an anti-glare coating. One unique feature is that you can control up to 25 panels through single RS232 using Christie's Video Wall Toolbox software on a remote PC. It's less than 3.75" deep.
