Calibre launches its range of scaler-switchers (HQView625 and Calibre HQView770) built from its own **HQUltra**, the world's fastest single-channel 4K presentation switching performance technology.

Calibre's own virtual-ASIC video processing technology provides these scaler-switchers with three functions in one product. The more powerful in the range, **HQView770 scaler-switcher**, offers...

In **Projection Mode**, HQUltraWarp provides real-time adjustable 4K warp & blend for fast and easy screen calibration.

In **LED Mode**, HQUltra provides LED-optimized 4K scaling with a pixel-accurate algorithm that preserves image detail even with significant downscale, a key requirement for driving LED videowalls with good quality images.

In **Presentation Mode**, HQUltraFast gives the user unprecedented switching speeds, changing visually instantly between input channels in 0.25 seconds.

World's Fastest LED Video Wall Scaling, Says Calibre
