At ISE in February, **Specktron** will unveil its latest interactive LED displays designed for education and corporate environments.

Offering a sleek appearance and designed with a brushed aluminum frame and anti-glare tempered glass, the **SDX series** is available in 55" and 65" Full HD models, The direct lit LED panels improves the products' reliability while Specktron displays are also equipped with a very responsive infra-red touch technology that enables fluent writing and content manipulation.

Including an integrated Android system, optional detachable PC module, built-in speakers and multi-language Interactive software, Specktron's SDX series displays are cost effective tools for the learning environment.
