

AG Neovo will be partnering with **VIDCO** and **Avenview** to debut its digital signage solution—video wall displays, video extenders/controllers, and video wall mounts—designed to help manage hypermedia content for 24/7 operations.

Digital signage video walls enhance flexibility in terms of scaling and content design for public space applications. To do precisely that, AG Neovo's slim bezel displays—**PM-65**, **PM-55**, **PM-43**, and **PM-32**—seamlessly integrate images on video walls meant for advertising, information sharing, or entertainment.

AG Neovo's video wall mounts (**VWM-01** and **VWM-02**) are modularly designed for fitting easily into a variety of customizable mounting solutions.

For traffic control authorities, broadcasters, and casino and industrial site operators, pre-programmed configurations are ushered onto the video walls in their control rooms to identify and contain anomalies. AG Neovo's **PN-46** is designed specifically as a building block for such CCTV surveillance and related applications.

AG Neovo's **HIP-Series** and **HVWIP-Series HDMI LAN video wall matrix extenders and**

controllers

called for.

will do the trick if even larger-scale configurations are

AG Neovo will also show for security professionals their displays fitted with other distinctive features: the **RX-22** and **RX-32** for CCTV and HD-SDI surveillance; the **LE-22** with an exceptional anti-blue light capacity; and the multi-touch

TX-19

.

Both designed as floor stand displays, the **DF-55** and **PF-55H** are intended for dual-sided and single-sided signage applications respectively.
