Engineered and designed by **ad notam** for digital signage video wall installations, the 3mm and 5mm Slim Bezel Line is equipped with a variety of input and output ports, allowing up to 24 panels to be connected, creating one video wall image.

The Slim Bezel Line allows for the 46.0" LCD panels to be connected both vertically and horizontally. Whether you chose a portrait or landscape video image, the seam between the panels will be almost a meager 6-8mm width.

The ad notam 3mm and 5mm bezels in addition to enhanced picture quality with high brightness, high contrast and a wide viewing angle. Ad notam's patented DOG (Direct-on-Glass) mounting system allows for multipanel flush-fitted installation onto a single 2000mm over 3150mm mirror or glass panel.
