AUO demonstrates a lineup of 42"- to 65" Ultra HD curved LCD TV displays with wide color gamut at the China Information Technology Expo & China Optoelectronics Display Expo 2014 show in Shenzhen, China.

AUO says the curved panels feature over 100% NTSC color saturation and super narrow bezel. The company believes the curved design fits viewing habits of human eyes, creating a concave screen that offers a wider viewing angle and immersive viewing experience.

Regarding professional monitor displays, AUO will debut 27" and 32" curved LCD panels featuring high contrast, wide viewing angle AMVA technology, and super narrow bezel design.

Supporting high color saturation of 100% sRGB, the panels revive image colors and allow users to examine objects in the screen thoroughly. The displays are designed for professional graphics, image processing, medical, audio-video gaming and industrial purposes.
