Available in portrait (KP555-S as shown) and landscape (KL540-S & KL546-S) configurations, **Peerless-AV's Indoor Digital Signage Kiosks** are designed for 55" ultra-thin displays to accentuate their slim design and large screen real estate.

Whether it's advertising, a digital directory, or wayfinding, this solution would fit a corporate campus, college/university campus, hospital, retail store, shopping mall and more.

With a wide range of aesthetic options available including multiple colours, acrylic trim and vinyl wraps, the kiosks can serve to help branding or to reinforce a corporate or promotional theme.

Easy-to-install: 8 points of tool-less adjustment quickly position the display in the kiosk window for flush alignment with optional cooling fans and speakers available to add extra functionality.
