“Over the past couple of years, we have seen a substantial increase in the number of ISE exhibitors offering display solutions that are above full HD resolution,” says Mike Blackman, MD, Integrated Systems Events. “The potential of these technologies is enormous, but these are complex systems and many industry professionals are enduring a steep learning-curve while implementing them.”

“By hosting the MegaPixel Summit at ISE 2013, we hope to create a forum in which the challenges arising from creating large-scale, multiple-component displays are addressed by a mix of different stakeholders: manufacturers, distributors, integrators, rental companies and end customers.”

Chris Chinnock, founder and president, Insight Media, says the Summit will focus on the three elements of what he calls the **Pixel Pipeline** ecosystem that defines a typical MegaPixel solution: Pixel Generation, Pixel Processing and Pixel Display.

“From the CPUs and GPUs that generate the images, to the software and hardware that processes, warps, blends and distributes them, and then on to the various projection and

## ISE 2013 to Host MegaPixel Summit

display technologies that can be used to show them – the MegaPixel Summit will cover every link in the chain,” adds Chinnock.

The MegaPixel Summit will be divided into three sessions. Each session will comprise five 30-minute segments, and delegates may choose to attend one, two or three sessions. Individual session costs will decrease according to the number of sessions booked. One session will cost 200 euro, two will cost 350 euro, while all three can be had for 450 euro.
