In USA, MMD/Philips debuts the **Philips Q Series** comprised of the 32" BDL3210Q, 42" BDL4210Q and 46" BDL4610Q.

The Philips Q Series is a family of edge-lit LED commercial displays aimed at digital signage applications. What's especially interesting about this announcement is the integration of a digital signage content software called **Flypaper Express** (with a free 30-day trial) built right into the monitors. The software comes equipped with 10 themed templates that can easily kick-start digital signage projects.

The 32-inch BDL3210Q is a 1366x768 resolution display while the 42-inch BDL4210Q and 46-inch BDL4610Q are both 1920x1080 resolution displays.

All three include HDMI and VGA ports, network-content delivery (as well as USB stick content delivery) and can be controlled via the network.
