How do you determine if the AV system achieves the client's objectives and is performing in accordance with the system design?

InfoComm International launches **The Audiovisual Systems Performance Verification Checklist** features 162 criteria developed by a global panel of AV experts.

This checklist is a valuable service but you can access it **without cost** at the InfoComm link below.

A featured requirement of InfoComm's **Certified AV Solutions Provider** (CAVSP) program, Diamond CAVSPs must show a completed Audiovisual Systems Performance Verification Checklist for at least one AV installation. Emerald CAVSPs need to commit to adopt this checklist for future AV installations.

InfoComm has convened a Standards Task Group to publish an InfoComm standard based on this list. That will then be submitted to ANSI for consideration of adoption by the Q2 2013. In the coming months InfoComm will offer a draft standard open for public review and comment.
