TouchSystems' InspiraTouch is a new line of interactive touch tables with two models: the InspiraTable and the InspiraPoint.

InspiraTable is the touch table: the display and the enclosure. **InspiraPoint** includes not only the touch table, but also multi-touch software and an optional PC for a complete multi-touch solution. Both of the 1920x1080 tables are available 42" and a 55" sizes and they company hinted to us that it might have a larger size by InfoComm. They have both HDMI and DVI-D inputs.

The touch tables are integrated with an infrared multi-touch technology that allows up to forty touch points. The tables also boast advanced anti-image sticking technology that eliminates ghosting and SmartPower, an energy-saving feature that can cut energy costs by up to fifty percent.
