---

At the *European Sign Expo 2013*, IT-pioneer Pyramid Computer GmbH brought out its **polytouch** business unit's Classic terminals:

the  
**polytouch 22**  
**and polytouch 32 CLASSIC terminals**  
, equipped with modern, light-insensitive, projected capacitive technology.

These Intel Core i7-3770S-driven units can detect 20 simultaneous touches at an ultra-fast 10 millisecond response time while rejecting palms resting on the screen. A neat trick to show off with at a show.

Not displayed at the show were **the new products in the polytouch portfolio: the multi-touch point-of-sale (POS) systems – polytouch 22000 POS and 32000 POS.**

These systems connect to the web to facilitate multi-channel strategies such as cross-selling, product promotion applications and social network integration. Using the patent pending Quick Mounting System (QMS), a range of polytouch extension modules can be added either side of the main display as and when a specific functionality is required. This enables retailers to keep up to date with the latest standards and processes.

The first production units of polytouch 22 CLASSIC are now available with enhanced features.

The polytouch chassis has been re-engineered to eliminate all visible screws from the sides and all POS models are now equipped with a receipt printer that can operate at three times the regular print speed. polytouch units have also been developed with a built-in VeriFone PCI/EMV-approved chip and PIN payment terminal as well as integrated near field communication (NFC) payment for cashless payments.

These displays are full HD with an anti-glare coating and share a stylish design with standard pedestal, "Elegance", wall-mount or built-in mounting options to suit different application environments, including room service check-in/check-out, access control, employee self-service, tourist and city information, product promotion and interactive advertising.

They are compatible with Windows 7 and Windows 8 as well as Linux. On the polytouch 22 CLASSIC an optional QR-code/barcode scanner and camera are available. The same applies to the polytouch 32 CLASSIC, along with an optional discrete AMD FirePro graphics card (for demanding 3D applications).
