At ISE, Peerless-AV will show for the first time their improved portfolio of flat panel stands, kiosks and trolleys to cater for the widest variety of applications and requirements. Products range from multi screen video wall trolleys, for mobile digital signage applications, and single screen stands, ideal for education and video conferencing, to secure kiosks designed for way-finding and public information points.

In addition to their regular stand at ISE 2012, Peerless-AV has created a dedicated digital signage stand in **Hall 11, Stand E64** to specifically showcase these solutions and their other innovations they think will distinguish the brand on its push into European markets.

Video Wall Trolleys. The Peerless-AV mobile, multi screen video wall display stands are engineered to accommodate screen sizes from 40" to 60" with universal mounting in either 2x2 or 3x3 landscape configurations. These models are easy to install, configure and maneuver.
