Audipack's Eye-Point is a flexible mobile presentation display that can communicate from showroom to supermarket.

An "Eye-catcher" for all applications, the latest development in the Eye-Point range is an outdoor version for 46" screens (even suitable for the high brightness 46" LCD screens, e.g., the popular NEC X461HB or Samsung 460DRn-- both 1500cd/m²).

New Age in design, Eye-Point's weather-proof enclosure both conceals and protects equipment. Integrated cooling, ventilation and heating facilities allow any weather environment.

The Eye-Point series is designed with full attention to service convenience and easy installation. All models feature a standard integrated quick installation swiveling arm for the flat panel, which leaves plenty of space for installing PCs and other equipment.

The flat panel display can be mounted with Audipack's universal AV mounting system, Lock&Secure, which allows you to install or swap any brand and type of flat panel without using tools.
