DVDO ships its DVDO Air Wireless HDMI mobile solution that allows users to wirelessly connect a wide range of HDMI devices to their HDTVs – and not just Blu-ray Discs, cable or game consoles, but also smart phones, tablets and computers – all in what DVDO claims is full 1080p and in 7.1 channel sound.

DVDO Air is a wireless hardware solution that enables customers to easily wall-mount or place HDTVs anywhere in the room without visible HDMI cables. Mount the HDTV and wireless receiver on the wall, connect DVDO Mobile or any other HDMI source component to the wireless transmitter, and with plug-and-play simplicity the wireless link is ready to go.

DVDO Mobile utilizes Mobile High-Definition Link (MHL) technology to connect to the latest MHL-enabled smartphones, tablets and mobile devices. DVDO claims that the DVDO Air + Mobile combo delivers uncompressed picture and sound from the mobile device to the big screen HDTV wirelessly and keeps your device fully powered at the same time.
